Exemplary Document Utilizing Integrative Publication Interface

June 12, 2014

Following is a proof-of-concept application of embedding computational model into the electronic publication. The model used here is a simple Brusselator model originally provided in form of the combine archive.
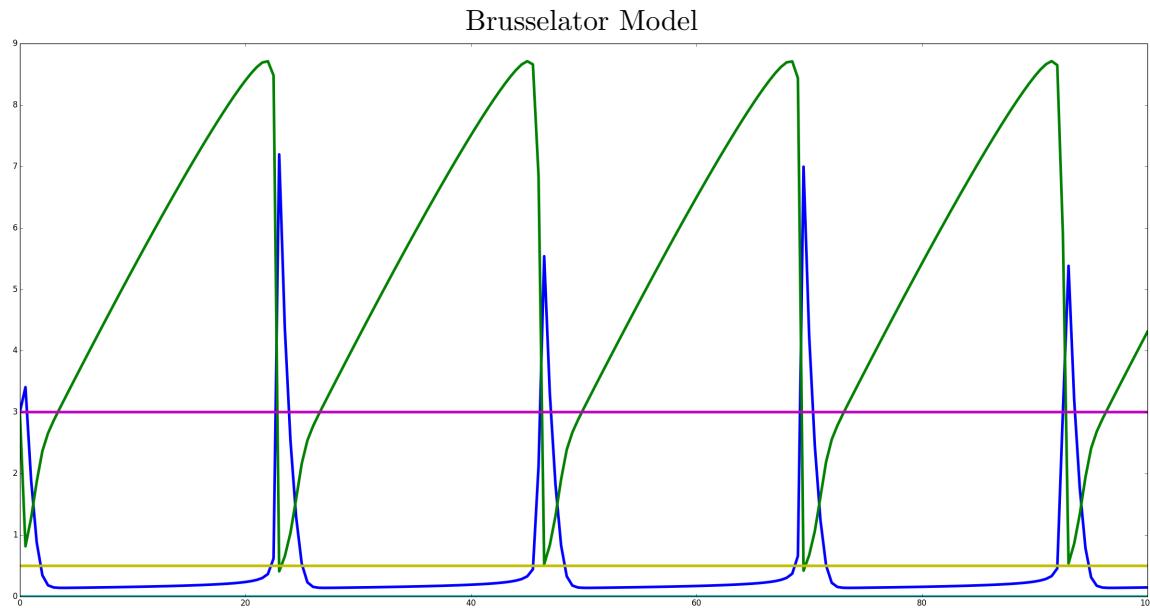

Brusselator Model

Fig. 1. This is a simple case of using the intPDF module. The figure is inserted, and a link to the script is provided along with it.

By pressing these links, users can access to the model and the parameters used to generate each figures.
All the necessary information is inserted in the publication, which eliminates the possibility of losing the data crucial for output reproduction.
